

Arca Continental Lindley receives the first international certificate from Enel Perú for the use of 100% renewable energy

- The I-REC Standard certification was granted for the use of 100% renewable energy in the production plants of Arca Continental Lindley throughout 2021.
- This is the first I-REC Standard certificate granted by Enel in Perú.

Lima, July 25th, 2022.- The electricity distribution and generation company Enel Perú granted Arca Continental Lindley the I-REC Standard certification (International Standard Certificate for Renewable Energy), issued by the renowned global firm The Green Certificate Company. This recognition, awarded for the first time by Enel in Perú, was granted for the consumption of 100% renewable energy in the bottling company's production plants in Arequipa, Trujillo, Zárata, and Pucusana during 2021.

“For several years, we have been working hard to become increasingly efficient in the use of our resources, including the energy we use in our plants and processes in general. This certificate reaffirms our commitment to caring for the environment, a principle that is part of our sustainability policy, and that motivates us to continue working firmly on this goal,” said Jesús García, general manager of Arca Continental Lindley.

This milestone is the continuation of a series of voluntary actions carried out by the company in the face of climate change. An example of this is that it was the first company in Latin America to receive LEED Gold certifications (Leadership in Energy and Environmental Design) in two of its main production plants, Trujillo and Pucusana. These certifications recognize the efficient use of natural resources and the health and safety measures that benefit the users of these facilities. Likewise, the company updates its distribution fleet every year to achieve greater efficiencies.

For his part, Marco Fragale, country manager of Enel Perú, stated: “At Enel Perú we are committed to being allies of all the actors in society to achieve the energy transition of our country. The fact that a company as large as Arca Continental Lindley is betting on the use of renewable energy will not only contribute to this goal, but it is also an example for its peers in the mass consumption industry to unite to achieve a zero-emissions Perú.”

The I-REC Standard certification is a global recognition that allows electricity generators and distributors to certify the physical origin and traceability of the technological origin of the energy they produce and supply, ensuring that it comes from 100% renewable sources. Through the agreement with Arca Continental Lindley, Enel Perú has committed to issuing an I-REC certificate each year certifying that the energy now used by the bottler's operations comes from renewable sources, specifically from the Matucana hydroelectric plant.

About Arca Continental Lindley

Exclusive bottler and marketer of all brands from Coca-Cola Perú, it is a symbol of the beverage industry for being the creator of the Inca Kola brand and for a successful track record of more than 111 years of commitment and investment in Perú. Since 2015, it has integrated its operations with Arca Continental, one of the most important Coca-Cola bottlers in the world. Today, Arca Continental Lindley has 6 plants for soft drinks, waters, juices, and isotonic and energy drinks. Its more than 4,500 collaborators serve more than 340,000 clients nationwide, consolidating the largest commercial and distribution network in the country.

###

Enel, which celebrates its 60th anniversary this year, is a multinational power company and a leading integrated player in the global power and renewables markets.

At global level, it is the largest renewable private player, the foremost network operator by number of end users and the biggest retail operator by customer base. The Group is the worldwide demand response leader and the largest European utility by ordinary EBITDA ^[1].

Enel is present in 30 countries worldwide, producing energy with over 90 GW of total capacity.

Enel distributes electricity through a network of over 2.2 million kilometers to more than 75 million end users. The Group brings energy to around 70 million homes and businesses. Enel's renewables arm Enel Green Power has a total capacity of more than 54 GW and a generation mix that includes wind, solar, geothermal, and hydroelectric power, as well as energy storage facilities, installed in Europe, the Americas, Africa, Asia, and Oceania. Enel X Global Retail, Enel's global advanced energy services business line, has a total capacity of around 6.6 GW of demand response managed globally and has installed 59 MW of behind-the-meter storage capacity. In addition, Enel X Way is the Group's new global business line fully dedicated to electric mobility, managing nearly 350,000 public and private EV charging points worldwide, both directly and through interoperability agreements.

^[1] Enel's leadership in the different categories is defined by comparison with competitors' FY 2021 data. Publicly owned operators are not included.
